AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, or claims in the application.

Listing of the Claims:

- 1. (Currently amended) A composition useful for the prevention, inhibition or treatment Parkinson's disease in a mammal comprising:
- a) live pigmented cells derived from the substantia nigra area of the brain of a mammal or the retinal pigmented epithelium layer of a mammal; and
 - b) a biodegradable polymer gel capable of photo-induced cross linking.
- 2. (Original) The composition of claim 1 wherein said biodegradable polymer gel further comprises a water soluble macromer having poly(ethylene glycol) diethylphosphatidyl (ethylene glycol) methacrylate.
- 3. (Original) The composition of claim 2 wherein said biodegradable polymer gel further comprises attachment proteins and growth factors to enhance the survival of pigmented cells after implantation.
- 4. (Currently amended) The composition of claim 3 wherein said attachment proteins ean be are selected from the group consisting of: laminin, fibronectin, and RGDS.
- 5. (Currently amended) The composition of claim 1 wherein the live pigmented cells are mixed with the polymer gel solution, wherein the polymer is present in the solution in an amount within a range of € 10 to 20% ₩ weight polymer/¥ volume of solution.
- 6. (Currently amended) The composition of claim 5 wherein the concentration of live pigmented cells is at least 200,000 cells/ml to about 800,000 cells/ml.

- 7. (Original) The composition of claim 3 wherein said growth factors are bFGF and EGF.
- 8. (Original) The composition of claim 7 wherein said growth factors are conjugated to polycarbophyll.
- 9. (Currently amended) The composition of claim 1 wherein said biodegradable polymer gel further comprises a water soluble comprising a Poly-vinyl alcohol is comprised of a water soluble polymer selected from the group consisting of: polymethylmethacrylate, poly-n-isopropylacrylamide, poly-2-hydromethacrylate, polyvinyl alcohols, chitosan, sodium alginate, and derivatives and copolymers thereof.
- 10. (Withdrawn) A method for the prevention, inhibition or treatment Parkinson's disease in a mammal comprising:
- a) harvesting pigmented cells (Human or bovine origin) from the brain stem (substantia nigra area) or from the retinal pigmented epithelium layer;
- b) maintaining said cells on BCE-ECM extracellular matrix coated dishes and suitable growth media;
 - c) harvesting at least 200,000 of said cells;
- d) preparing a mixture comprising a biodegradable polymer gel capable of photo-induced cross linking;
- e) mixing the live pigmented cells with the polymer gel solution (10 to 20% W/V);
- f) introducing into the brain of a mammal mixture of live pigmented cells with the polymer gel solution; and
 - g) photo-polymerizing the polymer gel using UV light with a photoinitiator.
- 11. (Withdrawn) The method of claim 10, wherein said biodegradable polymer gel further comprises attachment proteins and growth factors to enhance the survival of pigmented cells after implantation.

- 12. (Withdrawn) The method of claim 10, wherein said attachment proteins can be laminin, fibronectin, and RGDS, and wherein said growth factors are bFGF and EGF.
- 13. (Withdrawn) The method of claim 10, wherein said biodegradable polymer gel further comprises a water soluble comprising a Poly-vinyl alcohol.
- 14. (Withdrawn) The method of claim 10, wherein said introduction into the brain of a mammal comprises injecting into the brain of a mammal the mixture of live pigmented cells with the polymer gel solution using a needle means.
- 15. (Withdrawn) A composition useful for the prevention, inhibition or treatment a retinal cell disease in a mammal comprising:
 - a) live pigmented cells derived from the retina of a mammal; and
 - b) a biodegradable polymer gel capable of photo-induced cross linking.
- 16. (Withdrawn) The composition of claim 15 wherein said biodegradable polymer gel further comprises a water soluble macromer having poly(ethylene glycol) di-ethylphosphatidyl (ethylene glycol) methacrylate.
- 17. (Withdrawn) The composition of claim 16 wherein said biodegradable polymer gel further comprises attachment proteins and growth factors to enhance the survival of pigmented cells after implantation.
- 18. (Withdrawn) The composition of claim 17 wherein said attachment proteins can be laminin, fibronectin, and RGDS.
- 19. (Withdrawn) The composition of claim 15 wherein the live pigmented cells are mixed with the polymer gel solution (10 to 20% W/V).
- 20. (Withdrawn) The composition of claim 19 wherein the concentration of live pigmented cells is at least 200,000 cells to about 800,000 cells.

- 21. (Withdrawn) The composition of claim 17 wherein said growth factors are bFGF and EGF.
- 22. (Withdrawn) The composition of claim 21 wherein the growth factors are conjugated to polycarbophyll.
- 23. (Withdrawn) The composition of claim 15 wherein said biodegradable polymer gel further comprises a water soluble comprising a Poly(vinyl alcohol).
- 24. (Withdrawn) A method for the prevention, inhibition or treatment of a retinal cell disease in a mammal comprising:
- a) harvesting pigmented cells (Human or bovine origin) from the retinal pigmented epithelium layer;
- b) maintaining said cells on BCE-ECM extracellular matrix coated dishes and suitable growth media;
 - c) harvesting at least 200,000 of said cells;
- d) preparing a mixture comprising a biodegradable polymer gel capable of photo-induced cross linking;
- e) mixing the live pigmented cells with the polymer gel solution (10 to 20% W/V);
- f) introducing into the retina of a mammal mixture of live pigmented cells with the polymer gel solution; and
 - g) photo-polymerizing the polymer gel using UV light with a photoinitiator.
- 25. (Withdrawn) The method of claim 24, wherein said biodegradable polymer gel further comprises attachment proteins and growth factors to enhance the survival of pigmented cells after implantation.
- 26. (Withdrawn) The method of claim 24, wherein said attachment proteins can be laminin, fibronectin, and RGDS, and wherein said growth factors are bFGF and EGF.
- 27. (Withdrawn) The method of claim 24, wherein said biodegradable polymer gel further comprises a water soluble comprising a Poly (vinyl alcohol).

28. (Withdrawn) The method of claim 24, wherein said introduction into the retina of a mammal comprises injecting into the retina of a mammal the mixture of live pigmented cells with the polymer gel solution using a needle means.
